Possible Useful Variables

Shows: - country - date_added - release_year - duration (# of seasons) *dependent (measure of success) - rating - listed_in (genre) Most popular: - Drama - Documentary - Comedy

*most shows did not have a director listed

Movies: - director - country *dependent (measure of success) - date_added - release_year - rating - duration (# of minutes) - listed_in (genre) Most Popular: - Comedy - Animation - Drama

<https://www.whats-on-netflix.com/news/what-movie-tv-genres-perform-well-in-the-netflix-top-10s/>

R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)
```

```
##      speed          dist
##  Min.   : 4.0      Min.   :  2.00
## 1st Qu.:12.0      1st Qu.: 26.00
##  Median:15.0      Median : 36.00
##   Mean  :15.4      Mean   : 42.98
## 3rd Qu.:19.0      3rd Qu.: 56.00
##   Max.  :25.0      Max.    :120.00
```

Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
